

Spout Capture

Version 1.000

SpoutCapture is an application for Microsoft Windows that captures the visible desktop. Two Spout senders are created, one to send the entire desktop and one to send the part of the desktop beneath the application window.

Version 1.000 is built with Spout 2.007 beta release and is compatible with receivers of previous Spout versions.

Installation

Unzip the distribution file into any convenient folder and run *SpoutCapture.exe*.

Operation

The *SpoutCapture* window is transparent to allow capture of the desktop beneath. When the window is moved or re-sized, the window sender is updated to send the new part of the desktop.

Position the window as required and stretch to cover the part of the desktop required, such as an application of interest.

A Spout receiver application can receive from either "SpoutWindow" for the part beneath the application window or "SpoutDesktop" for the entire desktop.

Menu options

File menu

Exit

Quit the application.

Window menu

Show desktop

Show the desktop capture.

This disables the window capture.

Show on Top

Keep the SpoutCapture window topmost or not.
